How to use this guide

Numbered red circles on a picture match the numbered steps beside it. Green **Tip** boxes are shortcuts; navy **Important** boxes are things to remember; red **Careful** boxes are where a mistake costs something.

TIP

Everything in this guide is also inside the admin panel under **Help**, so you always have it to hand — even without this document.

IMPORTANT

The pictures were taken on a test copy of the site. Your own site will show your real products, requests and names — the buttons and layout are the same.

1 What your website does

Pin High UAE is a trade catalogue with a quote-request form. Buyers choose kit and sizes, place their logo on it, and send you a request. You price it and reply. **Nothing is charged online and no stock is reserved until you approve.**

The journey of a request

Home page. The headline, text, photos and banner are all yours to change (Chapter 9).

Catalogue. Only styles you have made visible appear. No prices are shown to buyers.

Branding No

YOUR NOTES

Logo on the left chest, please. Event is the first week of November.

Confirmation. A reference like PH-Q-2026-0001, a plain statement that this is a request not an order, and the response time you have promised.

IMPORTANT

The words "request", "not an order" and "nothing has been charged" are deliberate. A buyer who believes they have ordered is the most expensive misunderstanding in this business. Keep that language in anything you send.

Pin High UAE — Owner's Guide

Page 4 of 26

2 Signing in for the first time

Every person has their own email, password and an **authenticator app** on their phone. The first sign-in sets the app up. It takes about two minutes.

Before you start

- Your email address and the starting password (from whoever set the site up).
- Your phone, with an authenticator app installed: **Google Authenticator** or **Microsoft Authenticator** (free, from the App Store or Google Play). If you already use 1Password or Bitwarden, those work too.
- Somewhere safe to keep eight recovery codes — a password manager, or a printout in a locked drawer.

Step by step

- 1 Go to your site's address followed by /admin. You'll see the sign-in page.
- 2 Enter your **email** 1 and starting **password** 2, then **Sign in** 3.
- 3 Because no authenticator is set up yet, you are taken straight to the **Security** page.

Sign-in page. 4 is for later — "Forgotten your password?" (Chapter 13).

Security

Your own sign-in: declan@pinhighuae.com

One thing before you carry on. Every account needs an authenticator app as well as a password. It takes a minute — scan the code below.

SET UP YOUR AUTHENTICATOR APP

- On your phone, install an authenticator app if you don't have one: **Google Authenticator** or **Microsoft Authenticator** (both free, App Store or Google Play). 1Password and Bitwarden work too.
- In the app, choose "Add" or "+", then "Scan a QR code", and point it at this:

Can't scan? Choose "Enter a setup key" and type this, with "Pin High UAE" as the name:

YVYA EMPI AB5V M25J 4PSQ SKWB 2SCP GKJN
- The app now shows a six-digit code for Pin High. Type it here:

123 456

Turn on

ADMIN PASSWORD

You are still on the password the site was set up with — change it to one only you know.

Current password	New password	New password again

Change password

At least 12 characters.

Setting up the authenticator. Scan **1**, or type the key **2** by hand; enter the six digits **3**; press Turn on **4**.

- On your phone, open the authenticator app and choose **Add** (usually a +), then **Scan a QR code**. Point the camera at the square **1**.
- Can't scan? Choose **Enter a setup key** in the app, give it the name **Pin High UAE**, and type the key shown at **2**.
- The app now shows a six-digit number for Pin High that changes every 30 seconds. Type the current one at **3** and press **Turn on** **4**.

YOUR RECOVERY CODES

Save these now — they are shown once. Each one signs you in once if you lose your phone. Print them or keep them in a password manager. Anyone with a code and your password can get in, so treat them like keys.

Print

Copy all

☐

I've saved these somewhere safe

Continue to the dashboard

Your recovery codes. Shown once. Each signs you in once if your phone is lost.

1

Save the eight recovery codes now. Use **Print** or **Copy all** and put them somewhere safe. They will not be shown again.

2

Tick **I've saved these somewhere safe**, then **Continue to the dashboard**.

3

Still on the Security page later: change the starting password to one only you know (Chapter 12).

CAREFUL

Without recovery codes, a lost phone means asking another owner to reset you — and if you are the only owner, it means a developer. Keep the codes.

3 Signing in every day

Two steps: password, then the six-digit code from your phone. You stay signed in for 12 hours.

The code step. Type the six digits; spaces are fine. A recovery code goes in the same box.

Things worth knowing

- The code changes every 30 seconds. If one is rejected, wait for the next and try that.
- A code can only be used once — that's normal, not a fault.
- After too many wrong attempts you're paused for a short while. Wait, then try again.
- **Sign out** is top-right, on every admin page.
- Your email address in the top bar is a link to your own Security page.

TIP

Add the sign-in page to your phone's home screen and your browser's bookmarks. The address is your site's address plus /admin.

4 Your dashboard

The first page after signing in. It is ordered by what costs the business money if missed: problems first, then anything waiting on you, then the numbers.

ADMIN View site declan@pinhighuae.com Sign out

Dashboard **Quote requests** Stock Products Recipients Settings Users Security Help

Dashboard

1 SYSTEM STATUS ● Something needs attention

- Database — Running on the embedded development database.
- Email sending — Not set up. Quote requests are saved, but nobody is emailed and buyers get no confirmation.
[Enter a Gmail address and app password under Settings → Email sending, then send yourself a test.](#)
- Who gets quote requests — 2 addresses are emailed when a request arrives.
- Photos and artwork — Stored on local disk (development).
- Sign-in security — Sessions survive deploys; authenticators and the Gmail password can be stored.
- Admin accounts — There is one owner account.
[Make a second person an owner under Users, so a lost phone or a leaver never locks the business out.](#)
- Form abuse limits — Rate limiting is per process (development).
- Bot check on the quote form — Off. The hidden honeypot field and rate limit still apply.
Optional: TURNSTILE_SECRET_KEY and NEXT_PUBLIC_TURNSTILE_SITE_KEY. Needs your developer: set in Vercel → Settings → Environment Variables, then redeploy.

Not sure what one of these means? [The Help page explains each line.](#)

[Products and images](#)
[Who gets notified](#)
[Settings and announcement banner](#)

Dashboard. **1** System status · **2** the sections of the panel · **3** requests waiting for a reply · **4** straight to a stock upload.

Reading the System status card

Each line is one connection the site depends on. Green is fine. Amber is worth knowing. Red means something is not working — and each red line says **who** can fix it: a link into the panel if it's yours, or "needs your developer" if it lives in the hosting.

 **Green** — connected and working. Nothing to do.

 **Amber** — working, with a caveat. Read it once; act when convenient.

 **Red** — not working. Usually means requests are not reaching anyone. Act today.

LINE	WHAT IT MEANS	WHO FIXES IT
Database	Where requests, stock and settings are kept. Red means nothing written is being saved.	Developer
Email sending	The account the site sends from. Red means nobody is emailed and buyers get no confirmation.	You — Settings → Email sending (Chapter 8)
Who gets quote requests	The addresses that receive each request. Red means there are none.	You — Recipients (Chapter 8)
Photos and artwork	Where product photos and buyers' logos are stored. Red means uploads vanish on restart.	Developer
Sign-in security	Red means everyone is signed out on each update and authenticators can't be saved.	Developer — one setting
Admin accounts	Amber if someone has no authenticator yet, or if there is only one owner.	You — Users (Chapter 11)
Form abuse limits / Bot check	Optional protections on the request form. Amber is acceptable.	Developer, optional

Below the card

- **Failed notifications** and **requests waiting more than 24 hours** appear above the numbers in red when there are any. Deal with those first.
- **Awaiting a response** is a link straight to the new requests.
- **Stock** shows when the last upload was and how many sizes are running low.

5 Handling a quote request

A request is a lead. The panel keeps every line, size and logo the buyer sent, and tracks where you are with it.

When a request arrives

- 1 Everyone on the **Recipients** list gets an email: a summary plus a spreadsheet of the lines. The buyer gets a confirmation with their reference.
- 2 It appears on the dashboard under **Awaiting a response** and in **Quote requests** with the status **New**.
- 3 Open it, price it, and send the buyer your quote by email as you normally would. Then set the status so the team can see where it is.

Email sara@example.com

Phone [+966 501234567](tel:+966501234567)

Deliver to Dubai

Needed by 2 Nov 2026

WhatsApp the buyer

One request. Lines and sizes, the buyer's details and notes, any logo files, the status control, and downloads (Excel with retail RRP in AED — never wholesale or cost).

Statuses, and what touches stock

Editing a request

Lines, quantities and notes can be corrected after a request lands — until stock has been taken. If you need to change an Approved request, move it back to Quoted first, edit, then approve again.

IMPORTANT

Anything sitting in **New** for more than 24 hours is flagged on the dashboard. The buyer was promised a response time on their confirmation (you set it under Settings → Quoting) — keep to it.

TIP

Resend notifications on a request re-sends the emails — useful after fixing email sending, or when a new colleague joins the Recipients list.

6 Keeping stock current

The size grid buyers see comes from your last stock upload, minus anything approved since. Upload after every adidas delivery.

Stock. Upload the two adidas files; the page tells you exactly which columns it read and anything it could not match.

Uploading a delivery

- 1 Go to **Stock**. Choose the adidas **implementation file** (the template with articles and sizes) and the **invoice** (the quantities). Both are the spreadsheets adidas sends you.
- 2 Press upload. The site reads the files and shows a **preview**: new styles, quantities that will change, and anything it could not match to a known article.
- 3 Read the preview. If a column was picked up wrongly, fix the mapping on screen — the site remembers your choice for next time.
- 4 **Confirm.** Quantities go live on the public size grids immediately. The dashboard shows the upload time.
- 5 Single sizes can be adjusted by hand from the same page (a damaged item, a sample given away). Every adjustment is recorded in History with your name.

Stock → History. Every change to every size, with what caused it: an upload, an approved request, a manual adjustment.

Stock → Uploads. Past uploads. If one was wrong, **roll it back** here and upload again.

CAREFUL

A wrong upload shows buyers stock you don't have. Read the preview before confirming; if it has gone live, roll it back from Stock → Uploads rather than correcting sizes one by one.

7 Products and photos

Products arrive from the stock upload. Here you decide what buyers see and how it looks.

 **PINHIGH**

ADMIN

View site declan@pinhighuae.com [Sign out](#)

[Dashboard](#) [Quote requests](#) [Stock](#) [Products](#) [Recipients](#) [Settings](#) [Users](#) [Security](#) [Help](#)

Products

Names, prices and visibility. Stock quantities come from the adidas upload and are edited there, not here.

2 products need a name and colour

These came from an adidas invoice, which does not carry product details. They are on the site under their article number. Add a name, colour, category and your selling price and they will read properly.

KT2806

KS2292

Add photos in bulk

Drop a folder of photos here, zipped

The photo pack adidas send you, exactly as it arrives. The first six characters of each filename are the article number — HZ6891 Standard

Products. Every article the site knows, with its photos, visibility and category.

Common jobs

TO...	DO THIS
Hide a style from buyers	Tick it and choose Hide . It stays in the panel and in history; it just isn't listed. Untick to show it again.
Add or replace photos	Open the product and upload images. They are resized and optimised automatically. The first image is the one on the catalogue card.
Correct a name, colour or category	Open the product and edit the fields. The article number itself never changes — it is the link to the adidas files.
Deal with "needs review"	A new import the site couldn't categorise is held back from the public catalogue until you set its category.
Show pre-owned or ex-display stock	Off by default. Turn it on under Settings; anything not new is clearly labelled wherever it appears.

IMPORTANT

Buyers never see wholesale or cost prices anywhere — not on the site, not in the emails, not in the Excel download. Retail RRP is shown, labelled as retail, so a buyer can see the product's normal shelf price without mistaking it for your quote.

8 Email: sending, and who gets notified

Email is how requests reach you. Two separate settings: the account the site sends *from*, and the people who *receive*.

A. The account the site sends from

The site sends through a Gmail account you own, using a special 16-character **app password** that Google creates for exactly this purpose. Your real Gmail password is never used or stored.

- 1 Use a Gmail account for the business — a dedicated one such as `pinhigh.quotes@gmail.com` is ideal.
- 2 In that Google Account: **Security → 2-Step Verification** (turn it on if it isn't) → **App passwords**. Create one, name it "Mail" or "Pin High". Google shows a 16-character code once.
- 3 In the admin panel: **Settings → Email sending**. Enter the Gmail address and paste the 16-character code. **Save Gmail details**. It is stored encrypted and never shown again.
- 4 Type your own address under **Send a test to** and press **Send test email**. If it arrives, you're done — the status card turns green.

EMAIL SENDING — GMAIL
Not set up yet — quote requests are saved but nobody is emailed.

Gmail address: `pinhigh.quotes@gmail.com` App password: `16 characters from Google`

Not the normal Gmail password: in the Google Account go to Security → 2-Step Verification → App passwords, create one for "Mail", and paste the 16-character code here. It is stored encrypted and never shown again. Who receives quotes is set on the Recipients page.

Save Gmail details

Send a test to: `you@gmail.com` **Send test email**

Settings → Email sending. The status line at the top tells you which account is currently sending.

TIP

If Google won't show "App passwords", 2-Step Verification isn't on yet for that account. Turn it on first; the option appears afterwards.

B. Who receives quote requests

PINHIGH ADMIN View site declan@pinhighuae.com Sign out

Dashboard Quote requests Stock Products **Recipients** Settings Users Security Help

Who gets notified

Everyone active here is emailed the moment a quote request arrives — the full summary with a spreadsheet of the lines attached. Add as many addresses as you like; buyers never see any of them.

Email NOT CONNECTED

The system of record. Every request is emailed with a spreadsheet of the lines attached.

Nothing is being sent on this channel. Nothing is being sent yet — set up the sending account under Settings → Email sending, then send yourself a test.

ADD SOMEONE

NAME

Recipients. Everyone listed and ticked is emailed the moment a request arrives. Buyers never see these addresses.

- 1 Go to **Recipients**. Under **Add someone**, enter a name and email address and press **Add recipient**.
- 2 Untick someone to pause them (holiday cover), or **Remove** them.
- 3 Keep at least two active addresses so a single full inbox never loses a lead.

IMPORTANT

If the dashboard says a notification **failed**, the request is safe in the panel — nobody was told. Fix email sending (A above), then open the request and press **Resend notifications**.

9 Editing your public website

Everything a visitor reads on the home page, the contact details, and the promise you make on confirmations — all under **Settings**. Changes go live the moment you save.

FRONT FLYER
The home page hero. Leave a field empty to keep the default.

KICKER (SMALL LINE ABOVE THE HEADLINE)
Genuine adidas golf, supplied from Dubai

HEADLINE
The whole golf day.
One warehouse.

BODY
Tournaments, client gifting, staff kit — specified by the size run, embroidered with your

Front flyer. The small line, headline, paragraph and button on the home page. Leave a field empty to keep the default.

HERO BACKGROUND
Using the standard course photograph. Upload your own to replace it.

Choose Files No file chosen Add to hero

Wide images work best (1920px or more across). Up to 6; resized and optimised automatically.

Hero background. Up to six of your own wide photos behind the headline; with two or more you can turn on a slow slideshow.

ANNOUNCEMENT BANNER
e.g. New season stock landing week commencing 8 September

Shows across the top of every page. Leave it empty to hide it.

Announcement banner. A line across the top of every page — new season landing, holiday hours. Empty hides it.

CONTACT DETAILS

SALES EMAIL **PHONE**
sales@pinhighuae.com

WHATSAPP NUMBER FOR BUYERS

Used for the 'Send us a WhatsApp' button on the confirmation screen. Full international format.

Contact details. Sales email, phone, and the WhatsApp number behind the "message us" button on confirmations. Empty fields simply aren't shown.

QUOTING

MINIMUM UNITS PER BRANDED DESIGN	RESPONSE TIME WE PROMISE (HOURS)
12	24

Warns below this. Never blocks — a small enquiry is still a lead.

Shown on the confirmation screen and in the buyer's email.

Quoting. The minimum units per branded design (a warning to buyers, never a block) and the **response time you promise** — shown on the confirmation page and in the buyer's email. Set it to what the team will actually keep.

Also under Settings

- **New-product carousel** — a strip of chosen article numbers on the home page. Off until you turn it on.
- **Pre-owned and ex-display stock** — hidden from buyers by default (Chapter 7).
- **Check your work:** after saving, open the public site in a new tab (**View site**, top of every admin page) and read it as a visitor would.

10 When something isn't right

Start with the **System status** card on the dashboard. Then find the symptom below.

Who fixes what

In the admin panel — you

- Email sending and the test email
- Who receives requests
- Who can sign in, roles, resets
- Your password and authenticator
- Stock uploads, rollbacks, adjustments
- Products, photos, visibility
- Home page, banner, contact details, response time
- Every quote request

In the hosting — your developer

- Any status line marked "Needs your developer"
- Connecting pinhighuae.com to the site
- An owner locked out with no phone, no codes and no other owner
- New features, new brands' file formats, how prices are shown

Your site runs on Vercel; the database and files are on Supabase; the code is on GitHub. All should be registered to the business.

Symptoms and fixes

SYMPTOM	MOST LIKELY CAUSE	WHAT TO DO
A buyer says they sent a request but nothing arrived	Email sending is off, or nobody is on the Recipients list	Check the request exists under Quote requests (it will). Fix the red line on the status card. Open the request → Resend notifications.
Dashboard says a notification failed	Gmail app password wrong or revoked	Settings → Email sending → enter a new app password → Send test email. Then Resend notifications on the affected requests.
The buyer got no confirmation email	Same as above	Same as above. The buyer still had the reference on screen.
Site shows stock you don't have	A wrong upload, or a request approved twice	Stock → Uploads → roll back the upload; or Stock → History to see what changed a size, and adjust.
A style is missing from the public catalogue	Hidden, or "needs review", or sold out in every size	Products → find it → make it visible / set its category. Check sizes have stock.
The authenticator code is always rejected	Phone clock is wrong, or you're reading another site's code	Set the phone's time to automatic. Make sure the entry in the app says Pin High UAE. Or use a recovery code and re-set the authenticator.

"Too many attempts"	Repeated wrong sign-ins	Wait a few minutes and try again with the newest code.
Everyone was signed out at once	The site was updated and a hosting setting is missing	Sign in again. If it keeps happening, the status card's "Sign-in security" line will be red — that's for your developer.
A colleague can't accept their invitation	The link is over seven days old or was already used	Users → send a new invitation.
Uploaded photos disappear	File storage is not connected	Status card "Photos and artwork" — developer.

11 People and access

Owners manage who can sign in under **Users**. Nobody else — no developer — needs to be involved.

ROLE	CAN DO
Staff	Everything day to day: quote requests, stock, products, recipients, settings, their own security.
Owner	All of that, plus this page: invite and remove people, change roles, issue password resets, reset a lost authenticator.

 PINHIGH

ADMIN

View site declan@pinhighuae.com Sign out

2

ROLE

3 Staff — quotes, stock, products, settings

4 Send invitation

Email isn't set up on this site, so send sales@pinhighuae.com this link yourself:
<http://localhost:3411/admin/invite/PkHKMiPC2MPP7Qwk-S8-aYmuebLXq9Z1l0nyHbEb7CE>
[Copy link](#) [Dismiss](#)

Users. 1 everyone with an account and their state · 2 the new person's email · 3 their role · 4 send.

Adding someone

- 1 Go to **Users**. Under **Add someone**, enter their email 2 and choose Staff or Owner 3. Press **Send invitation** 4.
- 2 They receive an email with a link. It works once and lasts seven days. They choose a password, then set up their authenticator exactly as in Chapter 2.
- 3 Until they've done that, they show as **Invited — not yet set up** in the list 1.

The screenshot shows the 'Users' section of the PINHIGH admin interface. It lists two accounts: 'declan@pinhighuae.com' (Owner, Authenticator On) and 'sales@pinhighuae.com' (Staff, Invited - Not Yet Set Up). For each user, there are links for 'Make staff', 'Remove access', and 'Make owner'. On the right, there is a form to 'ADD SOMEONE' with fields for 'EMAIL ADDRESS' and 'ROLE' (set to Staff). Below the form, a message states that email isn't set up yet and provides an invitation link for the staff member.

If email isn't set up yet, the panel shows you the invitation link instead. Copy it and send it to them on WhatsApp — it works the same way.

Everything else on this page

LINK	WHAT HAPPENS
Remove access	Their sign-in stops working immediately, even mid-session. Nothing they did is deleted. Restore access undoes it.
Make owner / Make staff	Changes their role. The last owner can't be demoted — make someone else an owner first.
Send password reset	Emails them a one-hour link (or shows it to you if email isn't set up). Their authenticator is untouched.
Reset authenticator (lost phone)	Removes their authenticator. Next time they sign in with their password, they set up a new one.

IMPORTANT — ALWAYS TWO OWNERS

An owner is the only person who can reset another's lost authenticator. If the only owner loses their phone and their recovery codes, the business is locked out until a developer intervenes. Make a trusted second person an owner today; the status card will remind you until you do.

12 Your own security

Your password and authenticator live under **Security** (or click your email in the top bar).

Security

Your own sign-in: declan@pinhighuae.com

AUTHENTICATOR APP ON
You have **8** recovery codes left.
[Get new recovery codes](#) [New phone? Replace the authenticator](#)

ADMIN PASSWORD
You are still on the password the site was set up with — change it to one only you know.
Current password New password New password again

Change password At least 12 characters.

Security. Authenticator status and how many recovery codes are left; new codes; replacing the authenticator; changing your password.

Changing your password

- 1** Under **Admin password**, type your current password, then the new one twice. At least 12 characters — a short phrase is easier to remember and harder to guess than a "clever" short one.
- 2** **Change password.** Anyone signed in stays signed in until their 12 hours run out.

Recovery codes

- The page shows how many you have left. When you're down to two, press **Get new recovery codes** — a fresh set of eight replaces the old ones (which stop working).
- Treat them like keys: anyone holding a code *and* your password can sign in.

New phone

- 1** **Before** you wipe the old phone, sign in on a computer and choose **New phone? Replace the authenticator**. Scan with the new phone and confirm a code.
- 2** Old phone already gone? Sign in with a **recovery code** instead, then do the same.

13 Lost phone, forgotten password

Every one of these has a route back in that does not involve a developer — as long as there are two owners and you kept your recovery codes.

I've forgotten my password

EMAIL IS SET UP ON THE SITE

1. Sign-in page → **Forgotten your password?**
2. Enter your email. A link arrives; it works once and lasts an hour.
3. Choose a new password. You'll be asked for your authenticator code as usual.

EMAIL ISN'T SET UP, OR THE LINK NEVER ARRIVES

1. Ask another owner.
2. They go to **Users → Send password reset** on your account.
3. The panel shows them the link; they send it to you on WhatsApp.

I've lost my phone (or it was wiped)

I HAVE MY RECOVERY CODES

1. Sign in with your password.
2. At the code step, enter one recovery code.
3. You land on Security: choose **Replace the authenticator** and scan with the new phone.

I DON'T HAVE THE CODES

1. Ask another owner.
2. They go to **Users → Reset authenticator** on your account.
3. Sign in with your password; you'll be taken straight to set up a new authenticator.

I'm the only owner, and I have neither phone nor codes

THIS ONE NEEDS A DEVELOPER

The procedure is in the project's handover document (HANDOVER.md, "Break-glass procedures"). It takes a developer a few minutes. It is also exactly why the site keeps asking for a second owner.

Forgotten password. When email isn't set up the page says so honestly, and points you to an owner.

14 A rhythm for running the site

Ten minutes a day keeps everything current. Here is a routine that covers all of it.

Every day	Every week	Every delivery	Every quarter
• Open the dashboard. • Anything red? Deal with it. • Reply to requests in New ; set their status.	• Requests stuck in In progress or Quoted — chase or mark Lost. • Glance at "sizes down to single figures".	• Upload the adidas implementation file and invoice. • Read the preview. Confirm. • Check a product page.	• Users: still the right people? Two owners? • Recovery codes: enough left? • Home page copy and photos still current?

Handover checklist

Tick these once and the business is self-sufficient:

DONE ONCE
☐ The owner has signed in, set an authenticator, and saved the recovery codes.
☐ The owner has changed the starting password to one only they know.
☐ A second trusted person has been invited as an owner and has finished setting up.
☐ Email sending is configured with the business's Gmail and the test email arrived.
☐ At least two addresses are on the Recipients list.
☐ A test request has been sent from the public site and arrived by email.
☐ The status card shows no red lines (amber "optional" lines are fine).
☐ The Vercel, Supabase, GitHub and Gmail accounts are registered to the business, and two people know where the logins are.

15 Quick reference

Addresses

- Public site: your domain
- Admin panel: your domain /admin
- Help inside the panel: **Help** tab

Signing in

- Email + password, then the six-digit code
- Newest code only; each works once
- Signed in for 12 hours
- Recovery code goes in the code box

A request arrives

- Everyone on Recipients is emailed
- Open → price → reply → set status
- Approved / Won take stock; Lost doesn't
- Reply within the time you promised

Stock

- Upload implementation file + invoice
- Read the preview, then confirm
- Wrong? Stock → Uploads → roll back

Email

- Settings → Email sending: Gmail + app password
- Send a test to yourself
- Recipients: who gets requests

People

- Users: invite, remove, roles, resets
- Always two owners
- Invite links last 7 days; reset links 1 hour

Never

- Share your recovery codes or password
- Confirm a stock upload without reading the preview
- Tell a buyer they have "ordered" — it is a quote request

Call a developer for

- Any status line marked "Needs your developer"
- Connecting the domain
- Only owner locked out with no phone and no codes

16 Glossary

Admin panel	The private part of the site at /admin where you run things. Buyers never see it.
Authenticator app	A phone app (Google Authenticator, Microsoft Authenticator) that shows a six-digit code that changes every 30 seconds. The second step of signing in.
Recovery code	One of eight single-use codes that replace the phone code if the phone is lost.
Owner / Staff	The two roles. Owners can also manage people.
Quote request	What a buyer sends: lines, sizes, logo, details. A lead, not an order.
Reference	The request's number, e.g. PH-Q-2026-0001. On the confirmation, in every email, in the panel.
Size run	Quantities per size for one style and colour.
Article number	adidas's code for a style and colour, e.g. HZ6893. Never changes.
Implementation file / invoice	The two spreadsheets adidas sends with a delivery. The first lists articles and sizes; the second, quantities.
Retail RRP	adidas's recommended shelf price in AED, shown to buyers and labelled as retail. Not your quote.
Recipients	The email addresses that receive each new request.
App password	A 16-character code Google creates so an application can send from a Gmail account without knowing the real password.
System status	The dashboard card that reports each connection the site relies on, and who fixes it.
Vercel / Supabase / GitHub	Where the site runs, where its data and files live, and where its code is kept. Developer territory; owned by the business.

Pin High UAE — Owner's Guide, version 1.0. Regenerate this document from docs/owner-guide/ in the project whenever the panel changes.
